

# Public Works | Water | Wastewater Current & Upcoming Projects

Much of our work happens before problems appear

**1**

## Main Focus Areas

1. Lead service line replacements
2. Water and wastewater system upgrades
3. Street and utility infrastructure improvements
4. Flood control and drainage maintenance
5. Preventive maintenance to extend asset life

**2**

## Why This Work Matters

Protects public health

Reduces long-term costs

Improves reliability and resilience

**3**

## Every Decision Balances:

Weather conditions

Staff availability and training  
Equipment condition

Public safety

Budget and long-term planning

**4**

## What We Plan For

Emergencies and extreme weather

Preventive maintenance

Seasonal transitions

Regulatory requirements

**5**

## Public Works Manages Systems That Are:

Underground | Interconnected  
Regulated | Operating 24/7

Examples:  
Drinking water from well → treatment → testing → distribution

Wastewater collection → treatment → environmental protection

Streets, signs, lighting, stormwater, and flood control all working together

**6**

## Seasonal Work

Street sweeping and catch basin cleaning

Tree trimming and right-of-way maintenance

Hydrant flushing and valve exercising

Equipment servicing and inspections

Regulatory reporting and testing
