

# Public Works Mosquito Spraying Overview

**1**

## How Do You Decide When To Spray?

We monitor mosquito populations using traps and field observations

Decisions are based on mosquito counts and weather conditions (wind, rain, temperature)

We do not spray on a set schedule—we spray only when thresholds are met

**2**

## What Is Your Timing & Frequency

Spraying typically occurs at dusk, when mosquitoes are most active

Weather must be calm for effectiveness and safety

Some years require more spraying; some years very little

**3**

## What Do You Use To Spray?

Products approved by the MN Department of Health & EPA

Target mosquitoes, gnats, and blackflies while minimizing impact to pollinators and people

**4**

## Mosquito Trap Count
